U.S. resident population in the 2010 and 2020 Censuses — exact figures

Summary: According to the U.S. Census Bureau decennial census table, the resident population of the United States was 308,745,538 in 2010 and 331,449,281 in 2020. These are the official decennial counts reported by the Census Bureau.U.S. Census Bureau — Decennial resident population table

Findings

- 2010 resident population (decennial census count): 308,745,538 persons. U.S. Census Bureau — Decennial resident population table
  Supporting text: the Census Bureau table row listing “Resident Population” includes 308,745,538 for 2010.
- 2020 resident population (decennial census count): 331,449,281 persons. U.S. Census Bureau — Decennial resident population table
  Supporting text: the same table row lists 331,449,281 for 2020.

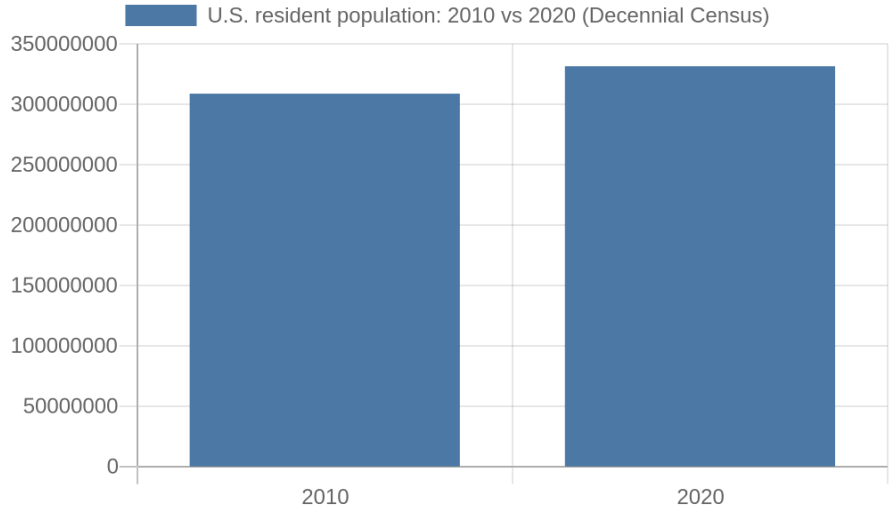

Comparison

Both values are directly comparable because they are decennial resident population counts for the United States from the same Census Bureau table (same subject, measure, unit, and scope).U.S. Census Bureau — Decennial resident population table

Year	Resident population (persons)	Source
2010	308,745,538	U.S. Census Bureau — Decennial resident population table
2020	331,449,281	U.S. Census Bureau — Decennial resident population table

Brief comparison: The 2020 decennial census count (331,449,281) is larger than the 2010 decennial census count (308,745,538), as reported in the Census Bureau table cited above.

Caveats and missing evidence

- The figures are the Census Bureau's decennial resident population counts taken from a single table row that lists multiple census years; the table header and row present several years together. See the source table for context and exact placement of each year's figure.U.S. Census Bureau — Decennial resident population table
- No additional methodological details (for example, post-enumeration adjustments or confidence intervals) are provided in the supplied table excerpt; the report presents the counts exactly as listed in the Census Bureau table.
